POLARIS **GP**

This is the open-source **Tarmo5 RC car.**
It's (mostly) 3D printed.

It can hit 60 km/h.

(And built badly, it'll rattle itself to pieces)

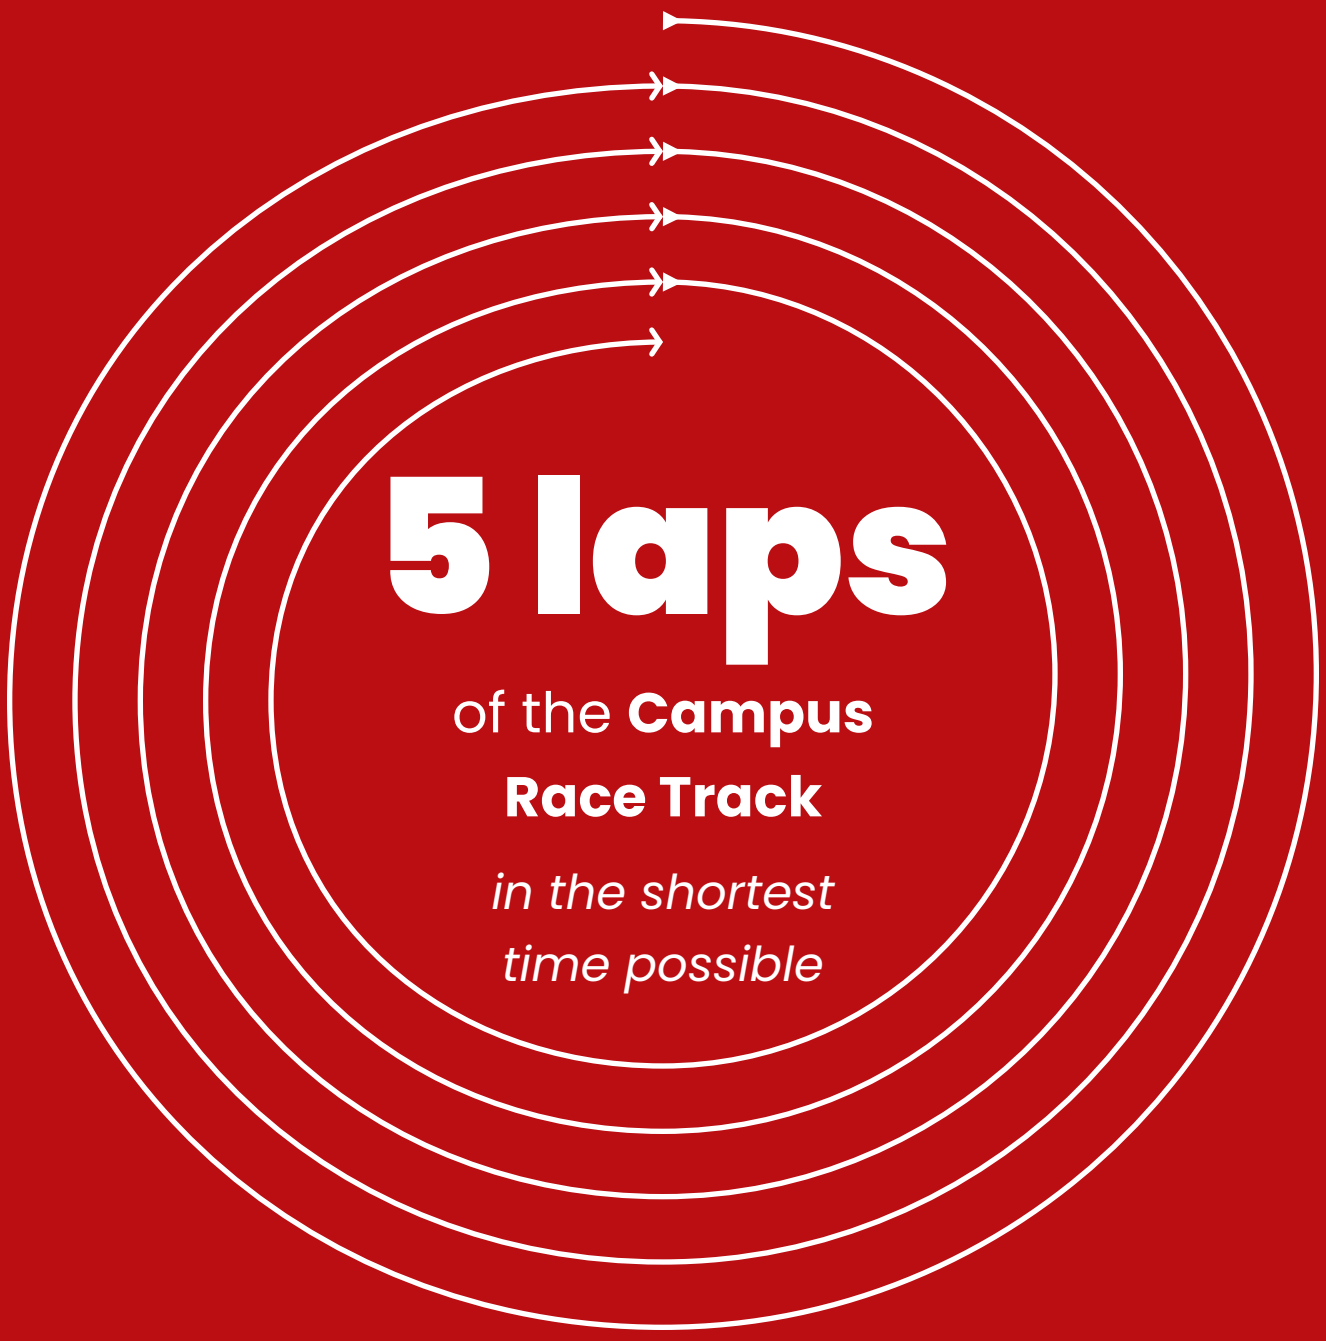
10 teams in Polaris will
receive one Tarmo5 kit, each.

Then, you get to work.

THE PROCESS

Your team has **four weeks** to learn, build, test, and tune its Tarmo5 to successfully complete five laps as quickly as possible, learning to manage:

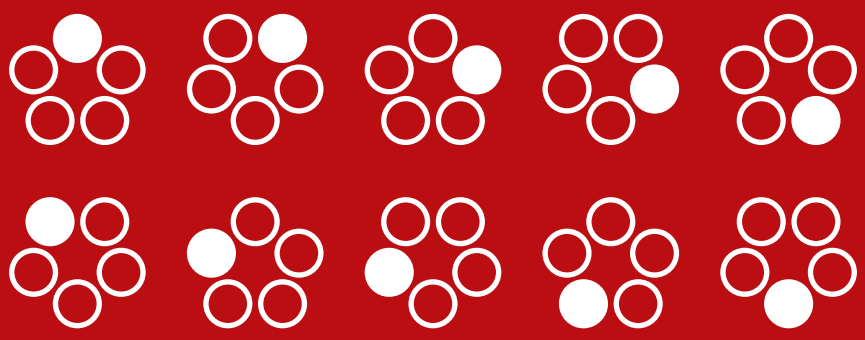
- DRIVE TRAIN PERFORMANCE
- TRANSMISSION RATIOS
- SUSPENSION SETUPS
- AERODYNAMICS AND STABILITY
- DRIVING TECHNIQUE AND CONTROL



- At the end of each week, teams will complete **one official run.**
- **Your score is determined by the average lap time across all five laps.**
- One mistake, one spin, or one mechanical failure can cost the entire run.

10 teams

5 members each

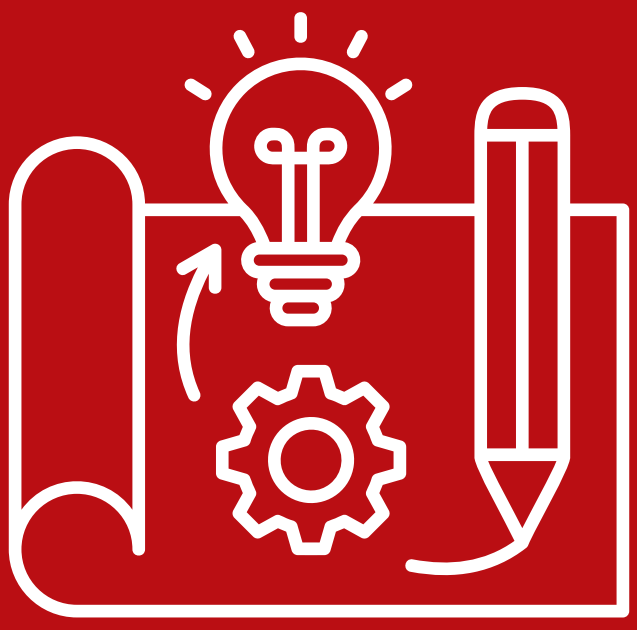


Each team should have **one principal member** representing the team, and manage coordination and strategy

---

No team should be entirely male.

At least two teams must have a female principal member



Beyond the hands-on experience
of running your own pit-crew,
there's a killer award pool (TBA).

BUILD · TEST · WRECK · REFINE · COMPETE · **REPEAT**

That's Polaris GP in a nutshell.
Have a crew in mind already?
